

# PREVALENCE OF NECK PAIN

Neck pain is one of the major musculoskeletal disorders in the adult population that may affect the physical, social, psychological and well-being aspects of the individual.

## NECK PAIN IS THE THIRD MOST COMMON CHRONIC PAIN CONDITION EXPERIENCED IN THE U.S.

Neck pain is a major cause of morbidity and disability in everyday life and at work, which doctors of chiropractic – who receive a minimum of seven years higher education – are trained to address without the use of drugs or surgery.
